

Ibanez®

OVERDRIVE

"Ibanez" Overdrive has come out well for fantastic fazz variation all over different from routine fazz box, "Ibanez" Overdrive must equal to demands from all players.

** Operation **

- 1) First connect the input of your amplifier to amp. Jack of the instrument and connect the output jack to the instrument jack. Then the circuit is automatically turned on and ready to play.
- 2) Sustain-time is to control the time of decaying just after the strings are touched and picked. Turning it clockwise increase sustain-time and depth of distortion.
- 3) Tone variation is changed by tone control-mellow sound at turning counterclockwise by eliminating high frequency range and crisper sound at turning clockwise by emphasizing high range. Any tone available at your pleasure.
- 4) Balance volume can adjust the volume of effect in proportion to that of normal. Preset the ration 1 : 1
- 5) Foot switch-feather touch for effect and normal. In normal position there is no afraid of modifying tone (high tone dumped) as the output of guitar directly circuited to amplifier.

You can double pleasure of countless effects by combined usage of "Ibanez" PT-999 PHASE TONE. Please try it.

** Important **

- 1) "Ibanez" Overdrive works good enough for continuous usage of 100 hours. In case of no usage and in rainy season, advisable change the battery at earlier.
- 2) To avoid the battery going out, keep the instrument jack unplugged in no usage. Please take off the battery when storing for long.
- 3) Remove the four screws on the bottom cover for changing the battery. Be sure to unplug both jacks beforehand.

** Specification **

Sustain time	1
