TALKING MACHINE

VOC-TM-776

Ibanez

Thank you for purchasing the Ibanez Talking Machine (VOC-TM-776). Ibanez is committed to making new and better products for the satisfaction of today's musician. All Ibanez electronic accessories are manufactured under strict quality control to assure long life and dependability.

The Ibanez Talking Machine allows you to "vocalize" your guitar sound with your mouth. With a little practice, you will be able to make your guitar actually "speak."

FEATURES

Sound Hose - Soft nylon for comfort and easy "mouth mixing."

Won't kink, collapse or crack.

Driver Unit - High efficiency 100 watts driver with wide frequency response.

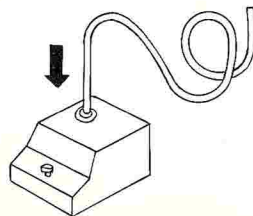

OPERATION

Connect the Talking Machine and sound hose as illustrated in figure 1. (To avoid clogging the hose with saliva, make one full turn in the middle of the hose.)

Connect output of amplifier to amplifier jack on the Talking Machine and connect speakers to speaker jack on Talking Machine as illustrated in figure 2.

NOTE: Be sure to make all connections before turning amplifier on.

With the footswitch on normal, the amp power is connected to the speakers and the Talking Machine driver. With the

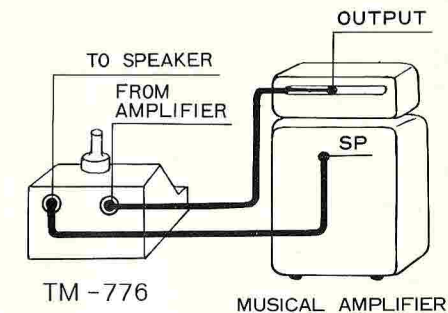

[Fig. - 1]

footswitch on effect, the amplifier power is connected to the Talking Machine driver.

Insert the mouthpiece into the corner of your mouth. As you play, the guitar sound will enter your mouth through the mouthpiece. By changing the shape of your mouth, the tone of the sound will change. Be sure to keep your mouth close to the microphone or the effect may be lost.

NOTE: It is possible to blow the driver when using high power to the unit with the hose disconnected. Don't switch the unit to "effect" unless the sound hose is in your mouth. Keep the hose and driver unit clean or the effect will be lost.
